Course/specification overview

A Level PE is a linear course and will be studied over two years. Below is the specification overview. If you click on the links it will take you to the AQA specification online.

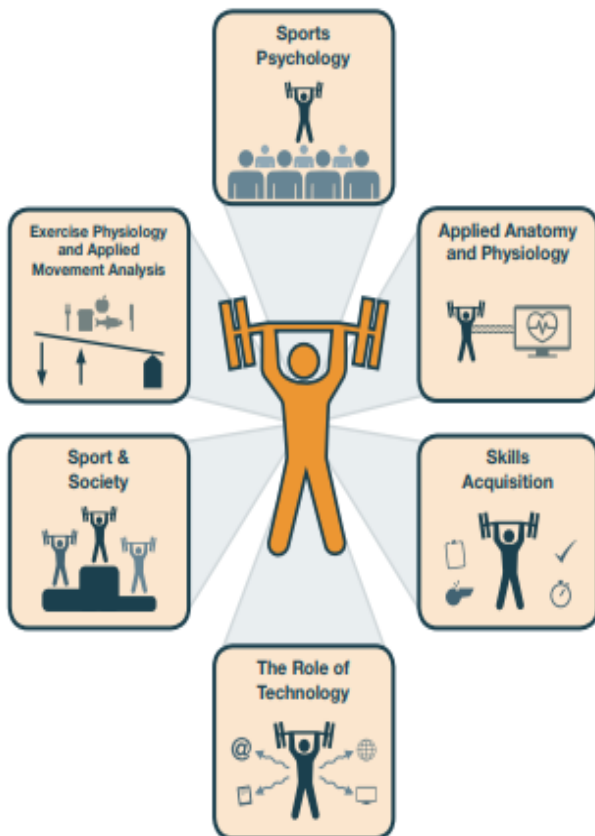

Subject content (click on links below)

- 1. [Applied anatomy and physiology](#)
- 2. [Skill acquisition](#)
- 3. [Sport and society](#)
- 4. [Exercise physiology](#)
- 5. [Biomechanical movement](#)
- 6. [Sport psychology](#)

- 7. [The role of technology in physical activity and sport](#)

Encourages a holistic understanding of PE

Our new AS and A level PE qualifications will further develop students' understanding of how the mind and body works in relation to performance in physical sport whilst also engaging them with key issues and themes relating to contemporary global influences on physical education.

Nurtures skills and knowledge for progression to further study

Our Edexcel AS and A level Physical Education specifications have been designed to ensure sensible progression of content from GCSE to A level and include similar approaches to assessment.

- ✂ **Builds on the understanding developed at GCSE** while also supporting learners choosing to begin their study of PE for the first time.
- ✂ **Encourages learners to become more competent, confident and expert** in their techniques, and apply them across different sports and physical activities.
- ✂ **Helps students develop important transferable skills** for progression to the next level, including numeracy, communication and an understanding of practical performances.
- ✂ The blend of scientific and social knowledge **strongly positions students to access** a growing number of physical education, sport and physical activity **higher education** programmes **or employment** in the sport, leisure and tourism sector.
- ✂ The **AS and A level** Physical Education specifications have been designed to be **co-teachable**, with the same topics at both AS and A level.

Topic links from GCSE to A level

GCSE	AS and A level
Applied Anatomy and Physiology	Applied Anatomy and Physiology
Movement Analysis	Exercise Physiology and Applied Movement Analysis
Sports Psychology	Skills Acquisition and Sports Psychology
Socio-Cultural Influences	Sport and Society
Health Fitness and Well-being	
Physical Training	
Personal Exercise Programme (PEP)	Performance Development Programme (PDP) through Performance Analysis at AS level.

The role of technology is embedded throughout AS/A level.

The use of data is embedded throughout GCSE and AS/A level.

How is the course structured?

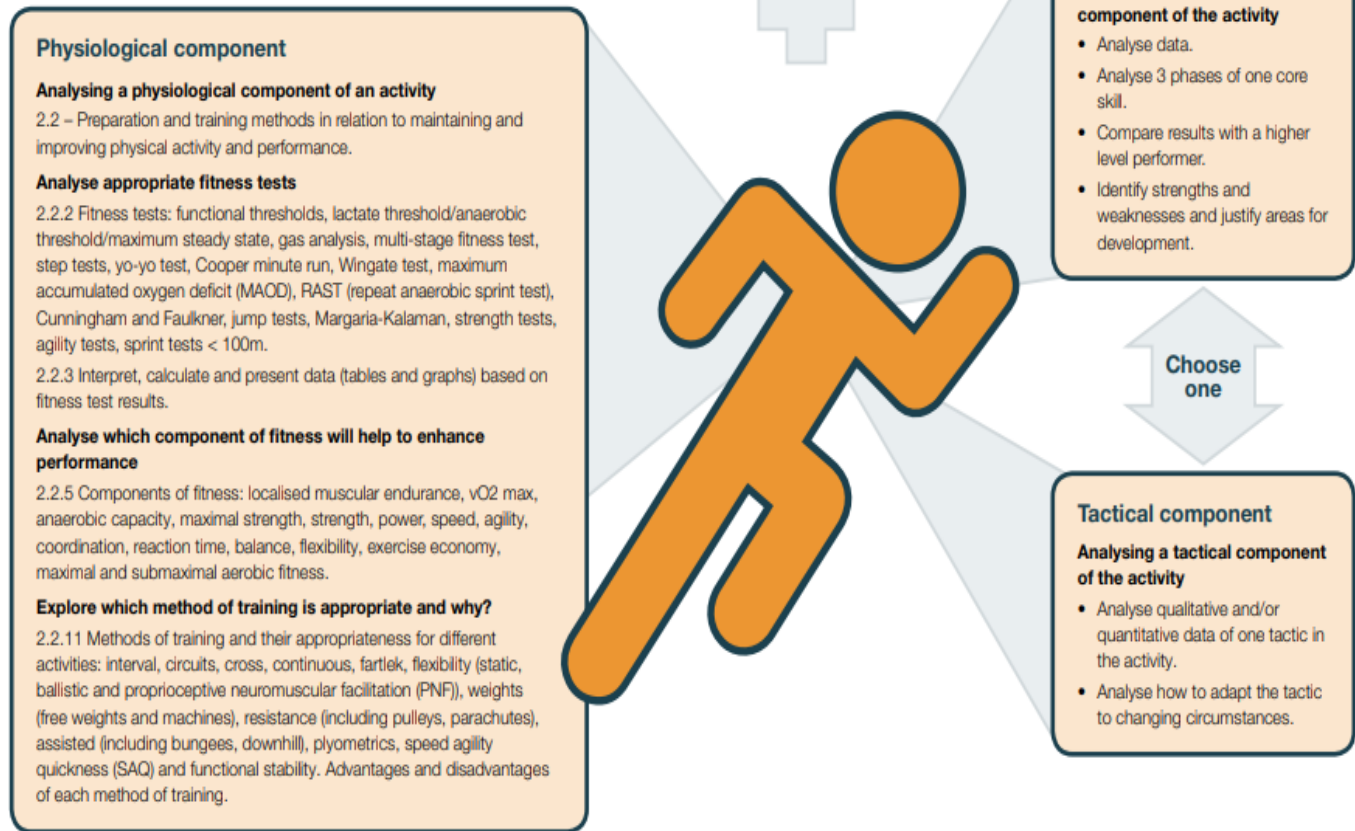

The course consists of **four** components:

- **Component 1** - you will learn about the physiological and biomechanical workings of the body. You will be introduced to the anatomical make-up of a performer and how this works alongside training, nutrition and recovery to impact performance.
- **Component 2** you will develop knowledge of the psychological and social principles that underpin physical education and sport. You will explore the role that sports psychology has in facilitating optimal sporting performance of an individual athletes and sports teams.

- **Component 3** you will develop your practical skills in the role of either a player or a coach. You will demonstrate a range of skills, tactics and strategies or compositional ideas while under pressure, in both a conditioned practice and a formal/competitive situation.
- **Component 4** you will undertake an independent study to complete a Performance Analysis and a resulting Performance Development Programme (PDP) in your chosen sport as a performer or coach.

	<ul style="list-style-type: none"> • Sport and society 	 30%
Component 3: Practical performance		 40 marks
		 15%
Component 4: Performance Analysis and Personal Development Programme		 40 marks
		 15%

Here you can see how parts of the A level specification can be explored through students producing a Performance Analysis and then developing a Personal Development Plan (PDP)* in their chosen physical activity. Students will investigate two components of their activity - first the physiological component and then either the technical or tactical component.

* AS does not include a PDP

Our department expectations

Have at least a **97%** or higher attendance to lessons.

It is important that you attend all lessons as this will allow you to gain the knowledge you need to complete the course. Reading around the subject to develop your knowledge is also recommended.

Work at or above your target grade in homework and module tests.

Complete work set on the Everlearner. You will need to also ensure you use the Everlearner effectively for independent learning

Complete **ALL** homework and classwork even if you are absent from lessons.

Participate in extra-curricular sport and have a commitment to an active healthy lifestyle.

It is vital that you take part in a sport on a regular basis, at least once a week. This will help with your final assessment and it shows your commitment to sport. Your final assessment will either involve video evidence or a live moderation of one sport looking at skills in isolation and competitive performances

Attend PE moderation if called by exam board. Moderation of your practical is **compulsory** and part of your exam. It is a requirement of the exam board that you attend.

Attend mock and final practical assessments.

Read around the subject. It is vital that you not only complete the work you are set but you read about each of the topics you are working on. This will not only help you understand the work being covered it will also give you valid examples to use in your answers. See possible articles to read below.

The following pages outline several resources that you can use to start your knowledge for the topics covered in A Level PE. You will find podcasts to listen to, YouTube clips and TED talks to watch and books/articles to read. It is not vital that you complete them all, but it will help with information and knowledge relating to A Level PE before you start the course in September. You should be able to click on the link and this will take you to the relevant resource.

Watch

TED Talks

Watch this TED talk with Martin Hagger who is a Professor of Psychology at Curtin University.

Martin will provide an overview of the kinds of techniques that elite athletes use to prepare psychologically for their sport, give details of the scientific research into these techniques and how they work, and how the techniques might be used by competitive athletes and coaches to maximise performance.

https://www.youtube.com/watch?v=yG7v4y_xwzQ

Watch this TED talk in which Valorie Kondos Field, long-time coach of the UCLA women's gymnastics team, shares the secret to her success. Hint: it has nothing to do with "winning."

[Why Winning doesn't always equal success](#)

<https://www.youtube.com/watch?v=JJyeKiT8g4g>

Watch this TED talk in which Diana Nyad tells her inspirational story.

In the pitch-black night, stung by jellyfish, choking on salt water, singing to herself, hallucinating ... Diana Nyad just kept on swimming. And that's how she finally achieved her lifetime goal as an athlete: an extreme 100-mile swim from Cuba to Florida -- at age 64. Hear her story.

Watch this TED talk in which David Epstein discusses the role of technology in sport and how the sporting body type and shape has evolved.

When you look at sporting achievements over the last decades, it seems like humans have gotten faster, better and stronger in nearly every way. Many factors are at play in shattering athletic records, and the development of our natural talents is just one of them.

<https://www.youtube.com/watch?v=8COaMKbNrX0>

Television

Gamechangers (Netflix) – A really interesting film which looks at uncovering the truth about meat, protein and strength, showcasing elite athletes and cutting edge science.

Icarus. 2017- A film around doping within sport and current issues surrounding the use of drugs within sport.

Stop at Nothing 2014 – Filmmaker Alex Holmes creates an explosive portrait of disgraced cyclist Lance Armstrong.

Live Sporting Events- This will support how you show your understanding by using current examples from sport.

Complete

Tasks – to be completed and brought with you to the first lesson in September.

Task 1- Anatomy and Physiology task

Levers in Sport- using the YouTube clip below for background information and recapping from GCSE level, complete a table to demonstrate knowledge and understanding of levers within sport.

https://www.youtube.com/watch?v=d1wS_OlJzmI

Lever Type	1 st class lever	2 nd class lever	3 rd class lever
Diagram of lever			
Where it can be found in the body – provide two examples			
Give 2 examples of where the lever system can be used in sport			
What is the mechanical advantage of the lever system			
What is the mechanical disadvantage of the lever system			

Task 2 – Skill Aquisition

Theories of Learning- research the following four theories of learning. Create a power point presentation highlighting the key features of the theory, how this might relate to learning within sport and the positives and negatives of the theories application within sport.

- Operant conditioning
- Observational learning
- Social development theory
- Insight learning

Task 3 – Sport in Society

Increasing participation in sport- create a promotional video/advert for one of the national partners aiming to increase participation in sport. In the video/advert include the aims of the partner, the benefits to increasing participation and outline strategies already in place.

Task 4 – Exercise physiology

Design 3 different training programs; one for a marathon runner, one for a long jumper and one for a shot putt thrower. Justify your choices of the key training methods you have applied within the program.

- You will need to research and include the components of fitness for each athlete
- You will need to research and include the different principles of training that you would use
- You will need to select the fitness tests most appropriate for your athlete and discuss when you would test their fitness in your plan

Task 5 - Biomechanics

Calculate the speed of Usain Bolt in the 100m.

Time= 9.58 seconds

Calculate the speed of Mo Farah in the 5000m.

Time= 12 minutes 53 seconds

Calculate the speed of Allyson Felix in the 400m

Time= 49.26 seconds

Task 6 – Sports Psychology

Complete the personality test.

<https://www.quietrev.com/the-introvert-test/>

Explain the role personality plays on sporting performance.

Task 7 – Performance analysis

Watch a sporting match of your choice. Create a notational analysis table including the keys skills demonstrated within the game. Tally the number of times each skill is completed within a game by one of the individual performers.
